EXPERIMENT 9 Hospital Information System

AIM

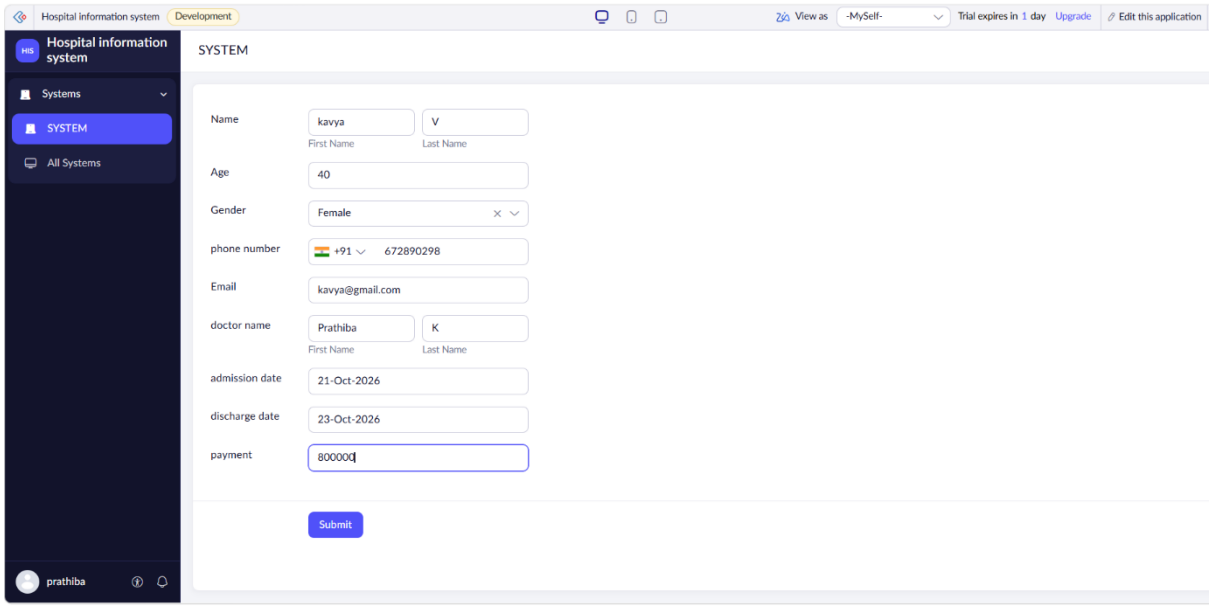

To create a simple cloud-based Hospital Information System for SIMATS Hospital using Zoho Creator to maintain patient details, attendant information, doctor details, and disease records.

PROCEDURE

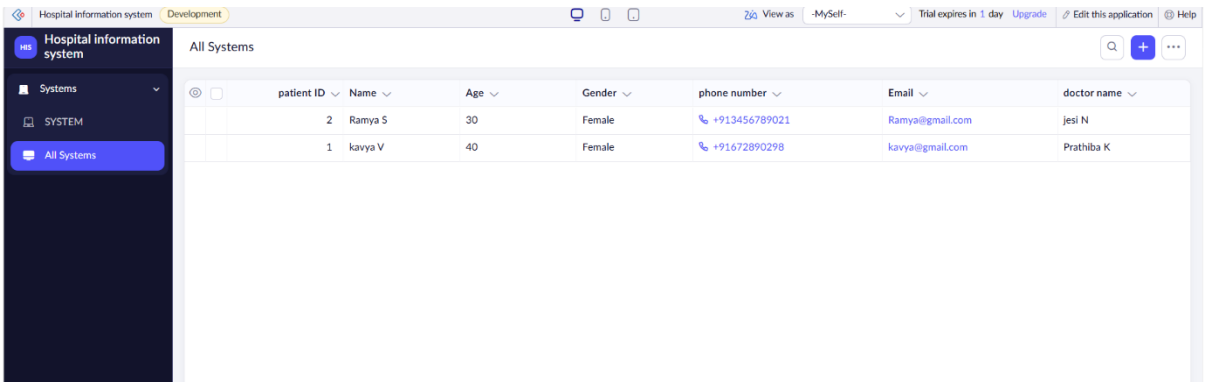

1. Open Zoho Creator and sign in to your account.
2. Create a new application named SIMATS Hospital Information System.
3. Create a form to collect patient and hospital-related information.
4. Add the necessary fields for patient details, attendant details, doctor information, and disease details.
5. Enter the patient information and assign the concerned doctor.
6. Store the patient records in the cloud database.
7. Organize the records for easy access and management.
8. Create a report to display patient details, doctor names, and disease information.
9. Test the application by entering sample patient records and checking whether the information is stored and displayed correctly.
10. Ensure that access to patient information is restricted to authorized users.

IMPLEMENTATION

INPUT

OUTPUT

RESULT

Thus, a cloud-based Hospital Information System for SIMATS Hospital was created using Zoho Creator to maintain patient records, manage attendant and doctor information, and organize disease details, demonstrating the Software as a Service (SaaS) model.
